

Bank of Albania - Museum

Animatik provides a 3D Holographic Cheoptic Projector to the new-built Museum of Bank of Albania.

Housed in the ground and first floors of the central corpus of the Bank, the Museum aims at creating a new public place where visitors may be informed and educated on topics related to money, National Bank, monetary policy and relations with EU. It will display important historic objects, collections and numismatic items. Besides, the Museum will propose cultural activities and will be the new attraction site for Tirana visitors.

The Museum architect, Ms Lila Bozo, as selected Sphinx to provide a complete media solution.

The Cheoptic offers a 360 degree holographic effect based on revolving 3D images or special video sequences. The projection principle is based on mirrors and projector / player encased in a compact display stand.

The light is split onto the four sides of an upside down pyramid. This gives an illusion of the picture being placed in the center of the viewing field, and a sense of 3D depth since it is viewable from all sides.
