

Bank of Albania

Apollo Fire Detectors and Kentec Electronics protect the new-built Museum of Bank of Albania.

Housed in the ground and first floors of the central corpus of the Bank, the Museum aims at creating a new public place where visitors may be informed and educated on topics related to money, National Bank, monetary policy and relations with EU. It will display important historic objects, collections and numismatic items. Besides, the Museum will propose cultural activities and will be the new attraction site for Tirana visitors.

The Museum architect, Ms Lila Bozo, as selected Sphinx to provide a fire detection solution.

The fire safety system is designed around a two-loop Kentec Syncro AS analogue addressable fire control panel and the Apollo XP95 range of analogue addressable detectors, MCP and sounders that will provide a complete building system solution with flexible cause and effect capabilities.

The whole system is fully controlled by a Kentec Graphical User Interface, which among its many features, provides a comprehensive history logging and reporting system allowing analysis of events and trends to be identified to reduce unwanted alarms.
